2.2	Shortener Plugin - Soon!	5

Release v0.3.0. (*Installation*)

The Jeeves Framework is a Python IRC library that makes creating and running IRC bots. A few of the core principles were borrowed from [Django](#). The basic idea came when I read about Jessamyn Smith's [Talk Back Bot](#).

You can easily get a bot up and running in seconds:

```
$ pip install jeeves-framework
$ jeeves-admin.py startbot examplebot
$ cd examplebot
$ python bot.py runbot
```

Now you'll have a bot that connects to IRC. You can add your own plugins to customize how the bot interacts with different commands.

USER GUIDE

1.1 Introduction - Soon!

Coming Soon!

1.2 Installation

1.2.1 Pip & Crate.io

Installing Jeeves is simple with [pip](#):

```
$ pip install jeeves-framework
```

or, if pypi is down using [crate.io](#):

```
$ pip install -i https://simple.crate.io/ jeeves-framework
```

1.2.2 Getting the Source Code

Jeeves Framework is actively developed on GitHub, where the code is [always available](#).

You can clone the recipe by typing:

```
$ git clone git://github.com/silentlmezzo/jeeves-framework.git
```
